

WATER STORAGE TANKS

Specifications

The Waterwell Wonder Tank range of anti-bacterial Water Storage Systems have been designed keeping in view the needs of all kinds of applications - domestic, commercial and industrial. The Water Storage Systems are available in various capacities from 200 to 2,000 litres. Each Waterwell Wonder Tank Water Storage System comes with a 5 year guarantee. Every tank is made of up to 4 layers, each one serving a very specific purpose. Moreover, every tank goes through strict Quality Control checks before it leaves the plant.

For continuous product development, the specifications are subject to change without prior notice.

TANK SPECIFICATIONS							
Capacity (Litres)	200	300	500	750	1000	1500	2000
Diameter (mm)	740	740	840	965	1060	1230	1340
Height (mm)	550	850	1110	1230	1350	1540	1740
Manhole Dia (mm)	270	270	380	380	380	380	380

Waterwell Wonder Loft Tanks For clean, fresh water all day!

Capacity	Length	Width	Height	Manhole Dia.
100L	775	533	280	270
200L	955	660	360	270
300L	1,105	762	381	270
500L	1,346	927	431	270

All dimensions are in mm.

The Vectus Group

Vectus Industries Limited is the India's fastest growing pipe and water storage solution Company. The group has been involved in manufacturing of PPR Piping Systems, CPVC Piping Systems, PVC Pressure Piping, Multi-Layer Composite Piping System, SWR Piping Systems, Blow Moulded Tanks, Rotational Moulded Tanks and various kinds of plastic moulded articles for agricultural and household purposes. With it's corporate office at Noida, Vectus Group has manufacturing facilities at 14 locations with a processing capacity of 50,000 MT of polymer per year.

Vectus is one of the few companies in India who processes all major polymers using all major technologies like Extrusion, Injection moulding, Blow moulding & Rotational moulding.

Vectus has been the pioneer in establishing blow moulding technology as an alternative method to Rotational moulding for commonly used water storage tanks.

Vectus group has signed a technical collaboration with Floteks, Turkey for manufacturing of PE manholes and underground storage systems in India. The manholes are made as per international standards and are widely used for infrastructural requirement. Floteks, Turkey is one of the most advanced rotational moulding company in the world. With this collaboration Vectus would be bringing state of the art rotomolding technology to India. This plant is commissioned on the already existing factory at Tumkur, Karnataka.

WATER STORAGE TANKS

With anti-bacterial treatment

Unique Threaded Lid - a first!

Multi-layer - 2, 3 and 4 layers

5 Years Guarantee

Bacteria - A Danger for Plastics

Products made of plastic without protection are exposed to the attack of microbes. Bacteria, yeasts and mould fungi can propagate without limits on all types of polymers. Their source of nourishment is, among other things, the components of plastic itself.

The increase of micro organisms has unpleasant consequences like odours, soiling and staining which impairs the quality of the materials. As a result, the products lose their functionality, require a higher degree of cleaning, or simply become unsightly. In the worst case, the bacterial attack can destroy the material.

The anti-bacterial protection additives have been tested according to international standards. This test result supports us in documenting the quality and effectiveness of the bacterial finish of Tank Water Storage Systems.

Performance, Quality and Reliability The Vectus Advantage!

We are fast emerging as the company that innovates to make life easier for you. Whether it is the pipes that we brought and changed the way the people looked at durability, hygiene, aesthetics and value for money in pipes. Each innovation at Vectus has been identified with Performance, Quality and Reliability. No wonder we are the country's fastest growing company in the category of plastic products.

We, at Vectus are committed to manufacture quality plastic products with adherence to the world class standards. We strive through the spirit of teamwork to maximize customer satisfaction through continual improvements at all levels.

Salient Features:

- Rounded edges to avoid stress formation.
- Computer Aided Design (CAD) incorporating the principles of Finite Element Analysis.
- Inner anti-bacterial layer resistant to all kinds of bacteria, fungi and yeasts - which in turn means increased life of the tank.
- Odourless water
- Better quality of water, which means better health for you & your family.
- Available in 7 sizes - 200, 300, 500, 750, 1,000, 1,500 and 2,000 litres.
